

JJB Sports superstore

Main Contractor: Pettifer Construction

Architects: Turner Wulfred & Sharp

Contract Period: Three days

Contract Value:

Package Value: £40,000

THE PROJECT

This was an extension to the Pallasades Shopping Centre at roof level. The floor was out of level and needed major attention. A 'fast track' programme was undertaken to reduce the flooring installation timescale.

It was agreed with the contractors and architects that sand and cement screed should be laid to take out the undulations of the existing slabs and then lay 2,500m² of Gyvlon Screed.

In just seven hours, 2,500m² of Isocrete Gyvlon was laid. A BBA Approved, self-levelling pump applied anhydrite screed. We rose to the challenge of working within a narrow timescale to ensure the store could open as soon as possible.

We used 10 screeders to meet the deadline and overlaid 40 mil of Gyvlon. To date this is our largest pour using Isocrete Gyvlon and equates to 100 cubic metres delivered to the site in five cubic metre lorries. These were off-loaded in just 17 minutes!
